Strawberry Plants

= AND

Gladiolus Bulbs

FOR THE SPRING OF

1914

M. Crawford Company CUYAHOGA FALLS, OHIO

A Few Words

The sending out of a new catalog gives us an opportunity for greeting many friends, and we always like to have a little talk before beginning business. We thank you all for your words that you have spoken of us. loyal kindliness of those with whom our orders recorded, tags written and mutual confidence, and you expect of early orders, on another page. us a continuance of fair dealing, while we, in turn, depend upon receiving in wish to send out every order just future the same hearty which has been accorded us in the make it easy for us to do this by nampast. Our acquaintance with some of ing a date on which they would like you is more recent, but we hope and expect that it will go on and ripen decide this point so long beforehand into settled trust. There are those who will deal with us this year for the first time, and we intend that our service shall be such as to merit their permanent patronage. To all our customers-the older, the newer, and the prospective—we extend our best wishes for this new year and all the future.

OUR SHIPPING SEASON begins about the first of April, sometimes a bank paper, money order or registered little earlier than that, very seldom later.

OUR PACKING is first-class, secure minimum.

their destination in good order. If factorily if permitted. To those who they are not satisfactory we will re-order late in the season we recommend place them or return the price. This naming a second choice in case we are guarantee does not extend to other out of the first. We reserve the right countries than our own, and it termi- to substitute as best we can after the nates here on the first day of May.

MISTAKES-Our work is done with careful attention to every detail, and the past know that we make it our we seldom make mistakes, but they aim to serve our patrons well, to furare possible, and when they do occur nish good plants, true to name, at fair we rectify them with pleasure. such cases we should be notified dition. Last year we received two promptly.

we take the greatest care to keep the the other we returned the money. varieties separate, and are perfectly believe in doing by others as we sure that those grown from stock of would wish them to do by us, and it our own raising are pure and true to is our earnest endeavor to put our name; but it has happened a few times theory into practice.

in our experience-that plants purchased to propagate from were not true, and we sold them without knowing this. In such a case we cheerfully make restitution, but stipulate that we shall not be liable for more than the price of the plants.

ORDER EARLY-We can not urge patronage, and also for the good this too earnestly. By so doing you are reasonably sure of getting the va-We are receiving many applications rieties you want, and of getting them for catalogs from people to whom early, which means gain to you when you have mentioned us, and it is very they come into bearing. It is also an pleasant to be thus reminded of the advantage to us, enabling us to have we have had business dealings. Many all arrangements made before the rush of you know us and our ways nearly of the shipping season comes on. If as well as though we were personally you are not prepared to remit, forward acquainted, and we know many of you your order and have it booked, then almost as well. Years of agreeable send the money when you are ready business relations have established for the plants. See our premium for

> TIME OF SHIPMENT-It is our support when it is wanted, and our patrons can their plants shipped. If you can not say "Ship when notified," and write us when you are ready. Many of our customers have already established this habit, and we should be pleased to have all do so.

> > OUR TERMS are cash before shipment, except in dealing with experiment stations and other public institutions.

> > REMITTANCES may be sent by letter, or, if small, in stamps. Do not trust currency in letters unregistered.

SUBSTITUTION-Early in the seaand at the same time light, thus re- son it is needless to mention this, but ducing transportation charges to a later on it is a good plan to say. whether we may substitute or not. WE WARRANT our plants to reach Oftentimes we can do this very satisfirst of May.

Its color is a beautiful red, and County, Ohio, one of the most success- in delicious flavor it is unsurpassed, ful strawberry growers in the country, even by the Wm. Belt. It is firm, and and the producer of several excellent a wonderful keeper. For best results

ler believes that it is nearer perfection ing enough to make it worth while to

AUGUST LUTHER (P.)-One of the Several years ago, from a bed of his earliest. This berry was produced own seedlings he selected the finest some twenty years ago by August berries for seed, every specimen being Luther, of Missouri. In color, shape berries for seed, every specimen being Luther, of Missouri. In color, snape two inches or more in diameter. This and habit of growth it resembles process was repeated until the Frances. Willard was produced. It first came to our knowledge when Mr. Miller sent us a basket of the fruit by express in June, 1912. The berries were about the size and shape of eggs, a beautiful the size and shape of eggs, a beautiful caller with red flesh, and appearance makes it very tempting glossy red in color with red flesh, and appearance makes it very tempting. of the quality. This fruit so impressed The plant is healthy and hardy, has

BARRYMORE (P.) — Midseason. attention they produced fine its own since. It is a fine grower and The remaining plants were makes plenty of plants. It has yielded

BUBACH (I.) - Medium.

CHARLES I. (P.)-Very early. In-Crawford, at Cuyahoga Falls, or on Mr. troduced by Baldwin, of Michigan, Miller's place, six miles east of Millers from whose catalog we compile the following description: "A wonderful extra early strawberry. Ripens nearly a week before Michel's Early, and is very productive, yielding more quarts of large, fine looking berries than any AMERICUS (P.) - Everbearing, other early variety. The berries are Strawberries that yielded fruit contin-regular in form, and of good color and

CHESAPEAKE. (P.) — Late. century and more, but it is only re-Maryland berry, and one of the best of cently that any of value have been the newer late varieties. It makes Pan-American, from strong plants, but not many. It ripens Samuel Cooper, is a true everbearer, with Gandy, but is a much better but makes almost no runners. Autumn, yielder. The fruit is large, conical and also from Mr. Cooper, is pistillate, and uniform, very firm and of good qual-

very large, light scarlet, glossy and of judges, both before and after its introexcellent quality.

EKEY (P.)-Early medium. Makes large plants, but not many. It yields well, and the berries are large, long, dark red and glossy.

FIRST QUALITY (P.)—Late. One of the best growers, and as prolific as Sample, from which it descended. The fruit is large, dark red and good.

GIBSON (P.)—This Michigan berry came highly recommended, and seems to be holding its own. It strongly resembles Parsons Beauty and Pocomoke, which were twins in appearance and were popular a decade ago. Gibson is a vigorous grower and has clean, ample foliage and long roots, which enable it to endure drouth and produce great crops of fruit. This is large and beautiful, red to the center cross between Sample and Glen Mary, round, and has a fresh, green calyx. In quality it is good for canning, or fer roots, and is said to be very productive. the table with plenty of sugar, but not sweet enough to be eaten out of hand, one of the very few varieties that have like Wm. Belt.

rough in appearance. Popular in spite average quality.

of its faults.

We had several emphasized. killing frosts while strawberries were LATEST (I.)—Late. in bloom, one of which, on May healthy, vigorous and prolific. eleventh, was a freeze, and blackened fruit is beautiful—large, long conical, everything that was not frost proof. cherry red, sweet and delicious. For this reason we are unable to pro- very firm. nounce upon the productiveness of any of our new varieties. The Hub is a good grower, and is called a good yielder by those familiar with it. The fruit is beautiful, dark red, smooth and shining. It is equal to the average in flavor, perhaps better, but we do not count it extra good.

IOWA (P.)—Everbearing. Comparing this with Americus, both of which were produced by Harlow Rockhill of Iowa, it is fully as vigorous, and perhaps rather more productive. Its fruit is considerably larger, but not as fine in flavor, and yet it is as good as the average of June varieties. The young runners bear fruit, but not as freely as those of Americus. As a June variety the Iowa is so productive that it would be profitable if grown for a single crop and then plowed under MRS. MILLER (I)—Medium to very Last June we had in our home garden late. A fine variety, healthy and prosix plants of Iowa that had been grown in hills, quite close together. They yielded about eight quarts of beautiful berries, large, round, solid, and dark red to the heart. We had several pint cans filled from them and they were rich red and beautiful. It is needless to say that those six plants bore no fall berries, and neither did they send out runners. They had done their work in June.

very late. Originated in Illinois and introduced by the Kellogg Co., for which it is named. We have not seen it fruit, but it is a vigorous grower, and the Originated by Joseph A. Morgan, of introducers describe it as exceedingly prolific, and yielding larger crops as duced by Flansburgh & Son. It is a the beds grow older, up to four years. The fruit is described as very large be even more productive than that and very firm, rich red with golden great variety. We have not fruited it. seeds and red flesh. It is said to be delicious in flavor.

HUB (P.)—Medium to late. A seed-berries which cannot be excelled for

The plant is

MANHATTAN (P.)—Late. cellent variety. It makes plenty of plants, and they are large and productive. The fruit is very large and somewhat corrugated, but handsome, and quite firm. The largest berries weigh from one to two ounces.

MARGARET (P.)—This variety is remarkable for the vigor and productiveness of its plants, and the great size, brilliant beauty and delicious flavor of its fruit. It makes a very long season, and continues large to the last. It requires winter protection.

METEOR (I.)—Medium to late. This is a strong grower, with long, bushy roots, and very productive. The fruit is large, dark red and glossy, and endures unfavorable weather remarkably well.

lific, yielding fruit of great size, handsome color and rich flavor. It is remarkably firm.

MODEL (P.)—Midseason. We introduced this berry last season after having tested it for several years. It is a seedling of Wm. Belt, and is as good a grower and plant maker as that very popular sort. There is also a resemblance in the fruit, which is bright red and firm, of good size and KELLOGG'S PRIZE (P.)-Early to very fine quality. The first berry on each stem is cockscombed. Those that come after are conical.

MONROE (P.) - Medium early. Monroe County, New York, and introdescendant of Sample, and is said to It makes large, strong plants and a goodly number of runners. The origin-(I.) - Midseason. ator describes the fruit as "large, very Sometimes called Downing's Bride. smooth, dark red with a heavy green This splendid berry is a monument to calyx, extra firm and fine grained, with a thrifty grower, a moderate plant-Western New York Horticultural maker, and a great yielder of large Society, on a three years' test, and in

1912 it received the prize, which goes firm enough to make it a good market to show that it is worthy of all the berry. Its flavor is rich, though somepraise it has received.

OHMER (P.) — Midseason. Well known for its great size and beauty and its superior flavor. needs winter protection.

NORWOOD (P.)—Medium early. A strong grower, and yields large berries of beautiful color and excellent flavor. It is recommended as a good shipper. With us it lacks one important characteristic, productiveness. The amateur will find it interesting on account of the great size which it attains under high culture.

crop of double berries, which we con- markably well. tory. None of our correspondents have this is one of its strong points. ness.

PARCELL'S EARLY (P.) - Very few. early. Named for the originator, G. A. bright scarlet color."

ium in size and of fine flavor. The very firm, and most growers describe little runners, like those of Americus, its flavor as excellent, and we believe bloom before they take root.

REWASTICO (P.)—A native Allen, who says that it is the only real fruit in the fall. competitor the Chesapeake has ever late, but its season is not mentioned. T. Goldsborough, of Washington, D. C., It is healthy and vigorous, making and named for his personal friend who plenty of plants and yielding heavy was then President of the United crops of fruit which is large, conical, States. It makes large, healthy plants, and perfectly uniform in shape. It is and yields round, regular, dark red

what tart. This description is compiled from Mr. Allen's.

SAMPLE (I.)—This old favorite was It omitted from our list last year because we had no more plants than we needed for our own use, and many of our customers will be pleased to see it appear again. It is a splendid grower, and very prolific. The fruit is bright and attractive, roundish conical, red all through, and fairly firm. In flavor it is as good as the average, and its beauty makes it a ready seller.

SENATOR DUNLAP (P.)—Medium OREM (P.)-Later than Gandy and early and makes a very long season. more prolific. The plants are strong This berry was introduced by our firm and healthy. The fruit is large, light in 1900, and its present popularity is red and good. We have grown this a great satisfaction to us. It makes variety for several years, and it has many small, hardy plants; which have sometimes puzzled us by yielding a long roots and withstand drouth re-It needs a large sider undesirable, even though large amount of room, and should be planted and handsome. At other times its fruit much farther apart than most variehas been mostly smooth and satisfacties. It is immensely productive, and written of this apparent freak, and we fruit is of fine conical form, rich red do not know whether it has appeared throughout, very firm, and remains elsewhere or not. The berry is valu. fresh and bright after being shipped able for its lateness and productive long distances. In flavor it is superior to most varieties and second to very

A FERTILIZER FOR THE STRAWBERRY

follows:

Ammonia 2 to 3 per cent.

Available Phosphoric Acid, 9 to 10

Insoluble Phosphoric Acid, 2 to 3 per cent.

Actual Potash, 6 to 7 per cent.

brand is available, and not locked up to each rod of a row is a liberal apin worthless materials.

In using this fertilizer for strawberries it may be put in with a grain for any crop.

For several years we have been sell- drill, after the ground is prepared for ing a Potato Phosphate made in Zanes- planting, about a week or ten days beville, Ohio, which we consider first- fore the plants are to be set, thus giv-class. It is made of good materials, ing it time to became somewhat and produces wonderful results. It is blended with the soil. Another way is packed in 100-lb. sacks, and the price to wait a short time after the plants is \$1.50 per sack. The buyer pays the are set, until they have started into freight. The guaranteed analysis is as growth, and then apply the fertilizer by hand, strewing a small quantity around each plant. Care must be taken not to let it touch the leaves, as it is liable to burn them. It should be put on when the air is still.

The amount required is exceedingly variable. From 400 to 1000 pounds per acre may be used, and even more The ammonia contained in this if desired. For a small bed, one pound plication.

This is a complete fertilizer and good

The Giant Red Currant

This was raised from seed by Mr. tings frequently make thirty inches upright, vigorous great productiveness, and great clusso strong that it holds up its heavy Liberal discounts to the trade. Write load of fruit without bending. Cut- for terms.

E. P. Powell, a veteran fruit grower of growth the first year. In producand well known author, of Clinton, tiveness the Giant Red is probably N. Y., and is one of the class of large, superior to any other variety known. It has yielded a peck of fruit to a duced in recent years. From what plant. The clusters are large and we have seen and heard of it we handsome, and the fruit is of great we have seen and heard of it we size and beauty. Like all other curthink it the best of all. The qualities rants, the Giant Red is hardy, and, are considering all points, we believe it growth, to be the best on the list.

Prices: Strong, two-year plants, 30 ters of large and beautiful fruit. In cents each, \$3.00 per dozen, \$20.00 per vigor of growth and size of plant the hundred, by express. By mail, 5 cents Giant Red is unsurpassed. On Mr. each, or 25 cents per dozen additional. Powell's place it has attained a height Smaller plants at lower prices. of six or seven feet, and the wood is Rooted cuttings, 4 cents each by mail.
